SUMMARY

DOST Scholar, Computer Science Graduate, and Magna Cum Laude with exposure to cloud computing fundamentals in AWS through attended webinars and university coursework. Comfortable with basic system design concepts and looking to build hands-on cloud experience in an entry-level engineering role.

EDUCATION

Polytechnic University of the Philippines — B.S. Computer Science *September 2026*

DOST (Department of Science and Technology) Scholarship Awardee — RA 7687, 2022

HONORS & ACHIEVEMENTS

- Magna Cum Laude (Class of 2026)
- Civil Service Commission (CSC) Professional Level — Rating: 92.21% (August 2025)
- Civil Service Commission (CSC) Sub-Professional Level — Rating: 87.91% (March 2023)

CERTIFICATIONS & TRAININGS

- IT Bootcamp: Cloud Track (Cathedral of Praise; August 29, 2026 to October 24, 2026)
  - Completed an eight-week intensive bootcamp covering AWS cloud fundamentals, CI/CD pipeline implementation, Infrastructure as Code (IaC) using Terraform and AWS CloudFormation, and AI integration in the cloud via Amazon Bedrock and AgentCore
- Intro to Cloud Security, Compliance, and Identity (BlackStride Cyber; August 1, 2026)
- IEEE and Quantum Computing Industry Trends (PUP – CCIS; Jun3 11, 2026)
- Stack Up: Build the AI-Powered World Before It Builds Without You (PUP – CCIS; June 9, 2026) nt

EXPERIENCE

Technical Writer Intern — Project LODI (League of Developers Initiative) *July 2025 – August 2025*

DOST-PES (Planning and Evaluation Service) on-the-job training program for DOST scholars in IT-related courses (240 hours)

- Contributed to an end-user guide for an FAQ board (HTML/CSS/JS/PHP), including debugging nested navigation menus, within Project: LODI.
- Resolved merge conflicts across multiple branches in a shared Git repository, reconciling contradictory changes to maintain a stable codebase remotely,

PROJECTS

AI-Generated Text Detection — Research Paper & Pilot Study *Team Lead*

- Led a three-student research team through literature review and design of a feature-based approach to AI-text detection, grounding the prototype's structure in established research findings.
- Managed team workflow and iterative development workflow — reviewing and validating AI-assisted Python code outputs against literature-defined criteria at each stage, ensuring prototype behavior aligned with the research hypothesis before co-authoring findings in a research paper.

Stack Up Build AI *Secretariat Co-Head*

Academic requirement — collaborative seminar organized across 3 academic blocks

- Co-managed administrative documentation and compliance workflow for a multi-block seminar, maintaining accurate records across stakeholders to support tracking and reporting.
- Coordinated with multiple administrative offices to track, process, and secure event approvals — managing dependencies and ensuring documentation met requirements before proceeding to next stages.

SKILLS

- **Cloud and Infrastructure:** AWS (EC2, S3, Lambda, IAM, CloudFormation, Bedrock, AgentCore — bootcamp hands-on), Terraform, Docker (basic commands), CI/CD pipelines, basic networking (VPC, subnets, security groups — conceptual), CloudWatch (conceptual). AWS Cloud Shell (basic commands)
- **Document & Presentation Tools:** Extensive experience with Google Suite, Microsoft 365, and Canva; basic familiarity with Git version control (pull/push workflows); quick to adapt to new software and platforms;
- **Technical Fluency:** Reading and documenting codebases; Accurate Technical Documentation without relying solely on developer explanations; Understanding of user workflow and process.
- **Other:** Team leadership, stakeholder liaison, cross-office coordination, digital hygiene / data-handling awareness
